

Team Evaluation (UMD-STUDY APP Group 54)

Overview: In our team, we decided on a design for the UMD-STUDY APP and we have divided the work in the following ways :

Daniel Hill : Login Activity, User & Class Database Management and setup

Ed Tong (Myself): Class Resources, Class Notes, FlashCard Activity

James Donovan: ClassListActivity, TODO Activity, Quiz Activity

Team Member Review:

Daniel Hill : Daniel Hill made the initiative of contacting all the group members and informing everyone of the first deadline. He accomplished this via google mail and also set up the github repository. He is very cooperative and responds to project messages/emails within 1 business day. Upon discussion of the project, he offered to work on the login features of the application as well as the management of the user and class database. He also agreed to help set up the database and explain his work to us. As of now, no progress has been made on the app so far besides the planning and design of the app. Once Thanksgiving break starts and work starts to cool down, Daniel will begin work on his part.

James Donovan: James Donovan is very cooperative and offered to help the group in terms of setting up an activity that keeps track of all the classes. In addition, he also is going to implement the TODO and quiz activity. When working on the design/planning phase of the project with him, James is very eager to help and shows the potential to work very hard on the project.
